

INFOGRAPHIC

Compliance, made simple.

Compliance is no longer a box to tick – it's the cost of doing business. And the line between compliance and data security has all but disappeared.

THE CHALLENGE

Compliance keeps getting harder to hold

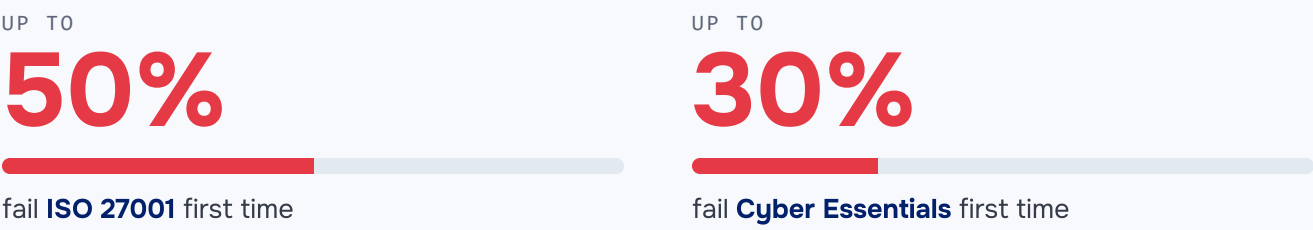

Regulation complexity
Keeping pace with fast-moving regulations while maintaining the controls already in place.

Resource limitations
Compliance demands grow. Budgets and headcount don't.

Digital expansion
The average company runs **130 SaaS apps** – each one a new compliance surface.

Without a streamlined approach, organisations face **costly breaches, drained teams and lasting reputational damage.**

THE SOLUTION

Make compliance continuous, not a crisis

Replace manual checks and audit scrambles with an automated, always-on posture programme.

Automate compliance monitoring
Detect misconfigurations the moment they happen – no manual checks.

Prioritise with targeted alerts
Guided remediation puts critical risks first.

Integrated posture management
Unified visibility across every cloud and SaaS environment.

Ready-to-use audit reports
Audit-ready documentation, on demand.

Interactive dashboard oversight
Compliance health and priority issues at a glance.

Automated assessments
Less manual effort, fewer configuration errors.
